

Senior Software Engineer

■ San Francisco, CA (Hybrid) | ■ Full-time

ABOUT US

We are a fast-growing technology company building innovative solutions for the future of work. Our platform serves millions of users worldwide and we're looking for talented engineers to help us scale.

JOB PURPOSE

Lead the development of scalable software solutions and mentor junior developers while contributing to technical architecture decisions.

KEY RESPONSIBILITIES

- Design and implement scalable software solutions using modern technologies
- Lead technical architecture discussions and make key design decisions
- Mentor junior developers and conduct thorough code reviews
- Collaborate with product managers to define technical requirements
- Optimize application performance and ensure high code quality
- Participate in agile development processes and sprint planning

REQUIREMENTS

Education:

- Bachelor's degree in Computer Science, Engineering, or related field (Master's preferred)

Experience:

- 5+ years of software development experience with proven track record of delivering complex projects

Skills:

- Strong proficiency in Python, JavaScript, or similar programming languages
- Experience with modern web frameworks (React, Node.js, Django, Flask)
- Knowledge of database design and SQL/NoSQL databases
- Experience with cloud platforms (AWS, GCP, Azure)
- Understanding of microservices architecture and distributed systems
- Strong problem-solving skills and attention to detail
- Excellent communication and teamwork abilities

BENEFITS

- Competitive salary and equity package
- Comprehensive health, dental, and vision insurance
- Flexible work arrangements and remote options
- Professional development and conference attendance
- 401(k) matching and generous PTO
- Modern office with free meals and snacks
